# HOW A SOFTWARE COMPANY HELPS ITALIAN BUSINESSES' HR TO COMPLY WITH LABOUR LAWS.

## A TAGGUN Case Study

### About the partner, [Studio Ziveri SRL](#)

Studio Ziveri is an Italian-based company that prides itself on developing the smartest and most integrated HR software, servicing over 300 medium and large corporations.

With Studio Ziveri's app and tools, companies can free up their time and resources and spend more on customisations for their customers.

### Studio Ziveri's ambitions

At the heart, this business is a software company, with a competitive advantage of an integrated labour consultant.

Italy's labour laws are complicated from an HR point of view and a labour consultant is as important to business as an accountant. For example in Italy, it is mandatory by law that if a business wants to keep the digital receipt, they need to detect the vat code (a numeric identification number) inside the receipt. It is of big interest for the company to collect as many receipts as possible as the tax is 40% yet the expenses that an employee may accrue are tax exempt so this gives the employer a lot of savings.

The ambition for the company is to provide this dual capability and automate the processes so that everything is integrated; one scan, one software, one workflow.

## Why choose to partner?

Founder- Alberto Ziveri, explains there are a few reasons;

"Firstly, Taggun has the experience and the data to detect the receipts accurately – since Taggun is scanning over 1m receipts per month, we trust the software and learning capabilities.

Secondly, we mainly process Italian receipts, but we value being able to process receipts internationally in various languages and currencies which Taggun allows us to do

And Thirdly, we value the data safety aspect. Labour contracts are sensitive documents and we do not send any information to a third party. Taggun is an exception because it is scanning receipts individually."

**TAGGUN gave Studio Ziveri benefits such as:**

- ✓ Data safety
- ✓ The speed of the scanning
- ✓ Precision of scanning
- ✓ Learnings from 1m+ scans per month

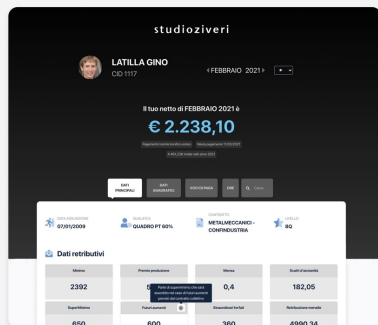

“

The speed of Taggun is crucial for our success because we have been compared with SAP Concur, which is the most famous receipt scanner in the world. Yet now our speed - thanks to Taggun - is faster.

I have been very happy with the collaboration from the Taggun team to develop a model that works for our business. The team listened and that has been very helpful. ”

**Alberto Ziveri,**  
**Founder, Studio Ziveri SRL**

## Studio Ziveri's Platform Journey

### How customers use the Studio Ziveri platform with Taggun's AI receipt scanner;

Step 1: An employee of one of our customers will make a purchase and keep the receipt.

Step 2: The employee opens the mobile application on Their phone, "My Paroll".

Step 3: They take a picture of the receipt.

Step 4: The app scans the picture of the receipt, and along with it, the Taggun software will transcribe the data e.g the date, the amount, the currency, the time.. etc.

Step 5: The employee will save the receipt which activates the data to be stored for reporting.

Step 6: A report is generated and sent to a manager for approval.

Step 7: The manager approves.

Step 8: The expense will be reimbursed in next payroll run.

## AI Models

Taggun **pre-built 20+** models to including:

- Retailer name
- Retailer address, city and country
- Receipt date and time
- Tax, total amounts and currency

Custom AI models are also available on request.

## Automatic receipt transmission that doesn't suck
